Commercial Millwork

CAPABILITIES & PROJECT GUIDE

Crafted In-House · Service-Driven · Trade-Proven

Stair components · Architectural trim · Hardwood details

Concept interiors and material study. Illustrative applications.

For architectural woodwork firms,
contractors and design teams.

MOULDING · STAIR PARTS · MILLWORK

uniquewoodproducts.com · Houston, Texas

01 / CAPABILITIES

The supply behind the detail.

UWP mills mouldings and fabricates hardwood components at NW Houston / Tanner Rd. Start with the parts, profiles and quantities your team needs to carry the architectural detail into production.

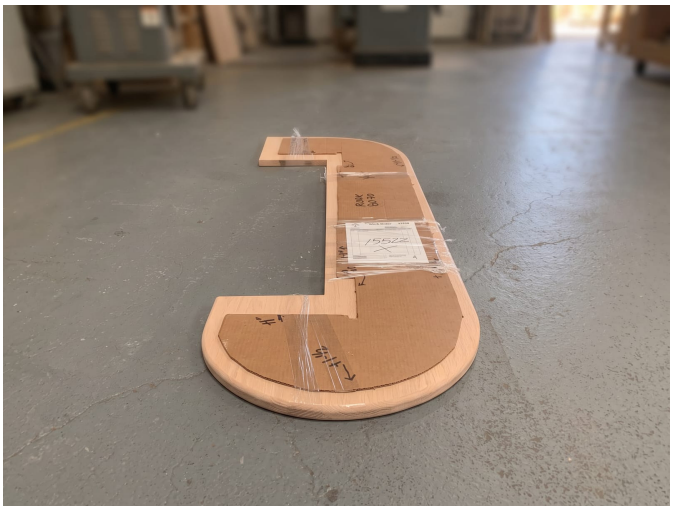

FIG. 01 / UWP tread and field template.

FIG. 02 / UWP radius fabrication.

Photography: UWP, NW Houston / Tanner Rd. Edited for presentation.

Mouldings

Base, casing, crown and panel moulding. Library profiles and match-to-existing work.

Stair components

Treads, risers, handrail, newels and related parts, defined by the project drawings.

Hardwood fabrication

S4S, jambs, panels, countertops and platforms, quoted to the required scope.

Material supply & fabrication

Your team coordinates casework, installation and field work. UWP's quote identifies the mouldings and components being supplied.

02 / PROFILES & MATERIALS

Profiles. Materials. Finish intent.

Choose the section first, then define species, grain direction and finish intent. A physical sample is the reference for final appearance.

FIG. 03 / Material study. Illustrative profiles and finishes; not exact catalogue sections.

Rift white oak

Straight grain and a warm tone. Identify rift selection where the grain is central to the design.

Maple

Pale tone and fine grain. A lighter direction for trim, panels and coordinated components.

Walnut

A rich brown tone and distinct grain. Confirm selection and finish against a physical sample.

Stocked primed

Standard profiles in primed material. Select the SKU, quantities and required lengths.

Milled to order

Library profiles or a custom match in the specified species. Send the detail and total footage.

03 / STAIR & PLATFORM

Stair and platform components.

Resolve the tread, riser, nosing and surrounding trim as one component schedule. The drawings and quote establish the scope for straight, curved and radius work.

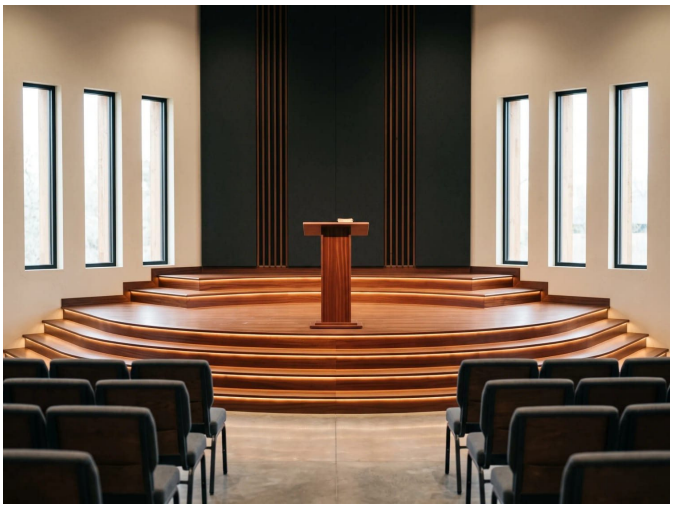

FIG. 04 / Worship platform concept.

FIG. 05 / Hospitality stair concept.

Concept interiors show possible applications, not completed UWP projects.

Components to discuss

Treads and risers
Landing and platform parts
Nosings and stage edging
Handrail and related stair parts

Information for quotation

Dimensioned plan and sections
Radius or field template
Species and finish intent
Part counts and required dates

Start with the complete detail.

Identify geometry, supports, interfaces and review requirements with the project team. Confirm the supplied components with UWP's quote.

04 / COMMERCIAL INTERIORS

A coordinated interior.

Lobbies, reception areas, corridors and shared spaces benefit from a consistent profile language. Separate repeated runs from feature areas so the package can be priced and coordinated clearly.

FIG. 06 / Reception millwork concept. Illustrative scope; not a documented UWP project.

Build the trim package

Base, casing, crown and panel moulding
Jambs and opening details
Custom and matched profiles
Coordinated hardwood components

Connect it to the drawings

Reference rooms and elevations.
Identify each profile and material.
Separate footage and part counts.
Note phases and required dates.

Architectural woodwork firms and contractors can use one clear schedule to connect design intent, quantities and the material being quoted.

05 / DRAWING & PRODUCTION

From drawing to production.

Identify the documents and review sequence your project requires. Confirm the applicable profile sections, product data and fabrication drawings during quotation.

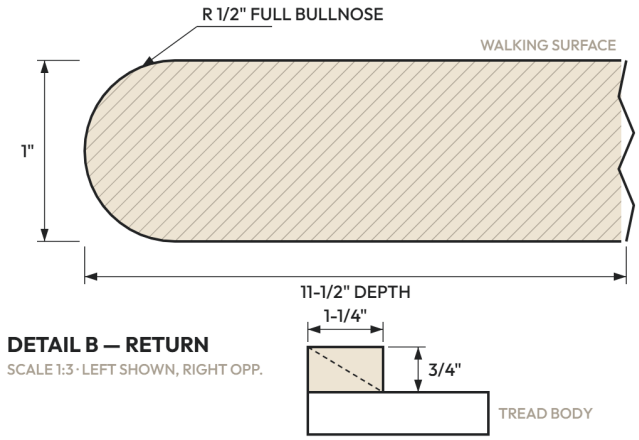

FIG. 07 / UWP drawing excerpt. Not to scale.
Illustrative detail; dimensions are not project instructions.

What to review

Geometry and overall dimensions

Species, grain and finish intent

Returns, edges and interfaces

Quantity and location

Drawing references and revisions

01 / Share

Send plans, sections, quantities and the required-by date.

02 / Review

Work through the material scope, quote and production timing.

03 / Confirm

Approve applicable drawings, profiles and samples before the run.

04 / Coordinate

Arrange pickup or discuss delivery, sequencing and destination.

This capabilities guide introduces the process. Project-specific drawings, product data and approvals form the actual submittal package.

06 / PREPARE THE SCOPE

Make the scope easy to price.

Tie each location to a profile or drawing reference, material and quantity. A consistent schedule makes the quotation easier to review against the plans.

LOCATION	PROFILE / DETAIL	MATERIAL	QUANTITY
Lobby base	Section / profile ref.	Species + finish intent	LF + lengths
Corridor casing	Opening / detail ref.	Species + finish intent	LF + lengths
Reception trim	Elevation / detail ref.	Grain selection	LF + lengths
Feature stair	Plan + section refs.	Species + finish intent	Parts + count

Example schedule structure. Populate it with the project's dimensions and quantities.

Include the current drawing set

Plans, elevations, sections and revision dates. Add a DXF, dimensioned sketch or physical sample for custom matching.

Identify the requested review

List the needed product data, profile sections, fabrication drawings and submittal format.

State the project requirements

Project name, contact, destination and required-by date. Identify phases, lengths and material selection.

Confirm before production

Availability, footage, supplied finish, applicable approvals and timing are confirmed with the quote.

YOUR NEXT PROJECT

Send the plans. *Define the scope.*

Bring the drawings, quantities and material direction.
We will work through the component scope with you.

01 **Drawings & details**

Plans, sections, profile references or a physical sample.

02 **Material & quantities**

Species, finish intent, footage, lengths and part counts.

03 **Timing & destination**

Required date, project location and delivery preference.
